Vue éclatée de l'assemblage du rotor exclusif Perrelet
Explosion drawing of Perrelet's exclusive rotor

CUSHION SHAPE, DAY, DATE AND POWER RESERVE, CALIBRE P-131

Your new timepiece is fitted with the exclusively designed rotor, the signature of Perrelet's high-quality, precision movements, glass-covered to display the workmanship of the movement and the beauty of the Perrelet «tapestry» engraving. This decorative concept was developed by Perrelet's own watchmakers and designers to pay tribute to the fabulous invention of Abraham-Louis Perrelet, the automatic movement (around 1770). This system allows the watch to wind up by simply using the energy produced by the wearer's own movements.

Your new watch was created to provide you with the clearest possible readability. The "cushion" shape is inspired by particular wristwatch case designs dating from the beginning of the 20th century. As a contemporary interpretation of traditional watchmaking, this piece from Perrelet perfectly symbolises the spirit of the brand. Your timepiece, fitted with Perrelet's P-131 calibre, offers you very useful complications such as the power reserve display, the day and the date.

TECHNICAL DATA ON THE MOVEMENT

- Thickness of the basic movement, oscillating weight included: 5.90 mm
- Fitting diameter: 25.60 mm
- Total diameter of the movement: 26.20 mm
- Vibrations/hour: 28,800 (4Hz)
- Jewelling: 26 rubies
- Autonomy of the movement, fully wound: more than 40 hours
- Automatic winding mechanism with oscillating weight fitted on ball bearing
- "Incabloc" shock-resistance system for the balance wheel
- Accurate time setting system

DESCRIPTION OF THE WATCH

Information provided by the watch

- hours
- minutes
- seconds
- day at 9 o'clock
- power reserve at 6 o'clock
- date at 3 o'clock

Information shown on diagram

- 1 Hour hand
- 2 Minute hand
- 3 Second hand
- 4 Day indicator hand
- 5 Power reserve indicator hand
- 6 Date window

Your watch has a 3-position crown:

- A Crown in the movement's manual winding position
- B Crown in the quick correction of the date position
- C Crown in the position for setting the time and for the correction of the day

BASIC FUNCTIONS

Setting the watch and correcting the day of the week

Pull crown to the C position. setting of time and correction of the day can be done by turning the crown forward or back.

Quick correction of date

Pull crown to the B position. The date can then be corrected by turning the crown back.

Winding the watch

If the watch stops, a few turns of the crown (in position A) will start it again. It will be wound up further by the movements of the wearer's wrist.
